

Clinching another BCA Green Mark Platinum award is testament to Samwoh's core values of sustainability and innovation.

In 2010, it launched the Samwoh Eco-Green building which was the first in the region to utilise up to 100 per cent Recycled Concrete Aggregate (processed construction demolition waste) in its structural application. It was also fitted with both energy and water efficient features.

The company is not resting on its laurels for its latest project, the Samwoh Smart Hub. Being Singapore's first Green Mark Platinum (Positive Energy) building, it will potentially raise the bar of energy-efficient buildings locally. The ambitious development, a pilot under the BCA Green Mark Super Low Energy programme, will set the precedence for future positive energy buildings here.

The four-storey building will adopt numerous state-of-the-art technologies to minimise energy consumption, while drawing energy from multiple sustainable sources. We hope that this iconic development will inspire and drive the built environment community towards greater innovation and sustainability beyond Singapore's shores.

For Fourth Avenue Residences which won us the BCA Universal Design Mark (GoldPLUS - Design) award, the user-centric design seeks to create meaningful social environments for all. For example, the development features themed gardens with pavilions with accessible features such as grab bars, spaces for wheelchairs and ample seating.

Citadines Millennium Ortigas' BCA Green Mark Certified Award (overseas buildings) reflects our belief that the environment should be at the core of what we do. And we build a common ground with team members who share this goal.

In implementing new products and technologies, we have experienced resistance to change. We dealt with this by addressing concerns raised by the stakeholders. Our perseverance has paid off; we are always at the forefront of implementing new innovations in Singapore, and opening doors for these innovations to be adopted in the industry.
